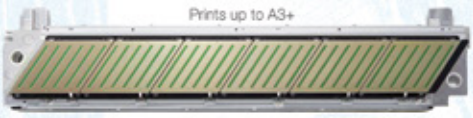
MENGAPA MEMILIH BUSINESS INKJET **PRINTER** ?

Epson business inkjet printers menghadirkan kualitas yang luar biasa, kecepatan sangat cepat, handal dan kinerja yang optimal untuk memenuhi kebutuhan bisnis Anda.

Revolutionary Compact PrecisionCore Linehead Design

Advanced built-in Nozzle Verification Technology memonitor kondisi nozzle dan kualitas cetak menyesuaikan secara otomatis tanpa interupsi, bahkan selama pencetakan.



Heat-Free Technology

Teknologi Heat-Free tidak membutuhkan panas dalam proses pengeluaran tinta. Sebaliknya tekanan diterapkan pada Piezo Element, yang melentur ke belakang dan meneruskan tinta dari printhead ke depan.

The Ecological Choice

Lakukan lebih banyak untuk bisnis Anda dan tetap lebih ramah lingkungan. Beralih ke Epson inkjet printer dan lihat bagaimana Anda dapat meningkatkan produktivitas yang lebih tinggi dan menurunkan emisi berbahaya dalam sehari-hari.

Printer inkjet kami menggunakan daya lebih kecil dari printer laser lainnya sehingga Anda tidak hanya peduli terhadap lingkungan, tetapi Anda menghemat biaya juga.

Jumlah karbon dioksida yang dipancarkan oleh laser printer akan membutuhkan hingga 8 pohon untuk menyerap semua karbon dioksida sedangkan printer inkjet Epson hanya butuh 1 pohon.

Part yang terbuang dari Printer inkjet lebih sedikit dibandingkan printer laser.

Print head juga dilengkapi dengan Ink-Repelling Coating, lapisan pada permukaan print head untuk mengurangi kemungkinan terjadinya penyumbatan pada tinta. Teknologi printhead yang berupa lapisan tipis unik piezo (TFP) yang memadukan teknologi komponen superior dengan teknologi fabrikasi Micro-Electro-Mechanical-System (MEMS) yang berpresisi tinggi. Hasilnya adalah kecepatan cetak dan mutu gambar yang tinggi untuk pemakaian di berbagai kegiatan usaha dan industri.

Print Head Epson Micro Piezo

Teknologi Variasi Butiran Tinta (VSDT)

MENGAPA MEMILIH 3LCD PROJECTOR ?

Proyektor Epson 3LCD menghadirkan warna-warna menakjubkan dengan tingkat kecerahan yang seimbang, realistis, dan hasil gambar yang lebih hidup. Tidak heran jika proyektor Epson adalah pilihan utama masyarakat.

EPSON 3LCD TECHNOLOGY UNTUK WARNA CERAH & LEBIH NYATA

3LCD projectors offer brighter and more accurate as they produce different shades and hues by filtering, then mixing beams of the three primary colours (red, green and blue).

In a 3LCD projector , white light is first split into the three beams of primary colours. Each beam is then filtered through its own LCD that will give each individual pixel of the image its exact brightness for each colour. The colour beams are then perfectly recombined in a prism before being projected out as a complete image.

DISC PUBLISHER
DISCPRODUCER™ PP-50II/PP-100III/PP-100N

Discproducer combines Epson's market leading expertise in advanced inkjet printing and precision robotics to offer an efficient and highly reliable integrated disc publishing solution for a wide range of industries and applications. With Discproducer, fully automated Blu-Ray, DVD and CD publishing is just a push of a button away.

Unrivalled Performance with Cost Savings

Epson's industry-leading Micro Piezo print head and ink technology ensure uniform, stable ink droplets with virtually no satellites or misting, producing brilliant and crisp disc labels at a high resolution of up to 1440 dpi x 720 dpi.

Epson's Micro Piezo™ technology also protects against striation and ink bleed, and allows ultra-fine colour graduation plus razor-sharp text – even in small font sizes.

Instead of using the traditional whole cartridges, Discproducer utilises six individual high-capacity ink cartridges that can be easily replaced quickly, thus allowing you to print more while keeping running costs low.

Convenient Total Front-Operation

Discproducer is the only system in its class that offers the ergonomic advantages of total front-operation and status reporting.

Unlike other systems that allow publishing to continue without ink, Discproducer shows ink level status using an LED for each individual colour. This allows the printing process to be manually or automatically interrupted in case of a near-empty ink cartridge, thereby eliminating damage and waste.

High Precision and Reliability

Discproducer is built to withstand hard knocks and keep dust out. The solid body provides a sturdy housing for the intricate technologies within to run processes smoothly without any interruption.

Misfed and damaged discs are a thing of the past, thanks to the patented AcuGrip robotic arm which handles one disc at a time reliably. This reduces the risk of incurring scratches on the disc, often caused by conventional sliding mechanisms and prevents interruptions during unsupervised production, caused by mechanical blockage.

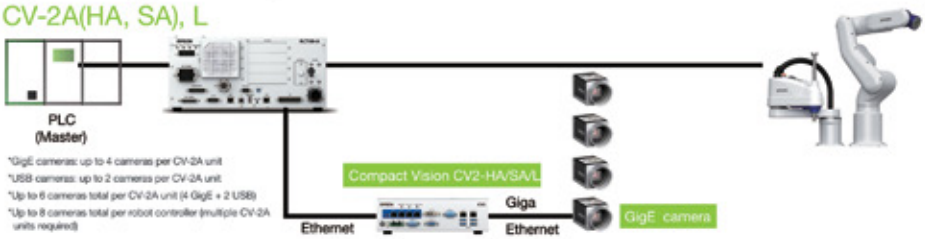
02 Vision Guide

Get advanced machine vision and image processing systems up and running fast with easy-to-use Epson Vision Guide software

- Built-in image processing engine assists vision-to-robot calibration, making it easy to align the robot's coordinate system with the camera's field of view.
- Workpiece position can be determined relative to robot coordinates without complex calculations.
- Image processing sequences can be created simply by entering a few parameters and pointing and clicking with a mouse.
- Advanced pattern matching and geometric search tools enable easy solution program development without writing a single line of code.

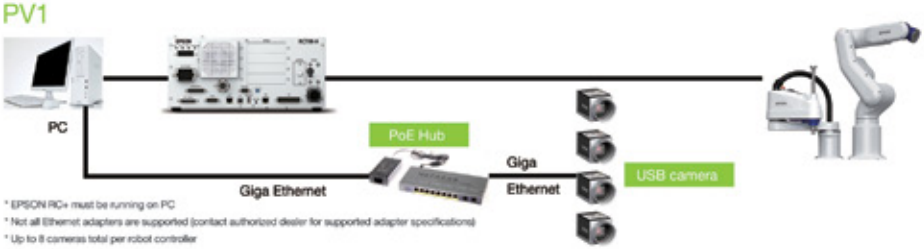
System configuration examples

CV-2A(HA, SA), L



*GigE cameras: up to 4 cameras per CV-2A unit
*USB cameras: up to 2 cameras per CV-2A unit
*Up to 6 cameras total per CV-2A unit (4 GigE + 2 USB)
*Up to 8 cameras total per robot controller (multiple CV-2A units required)

PV1



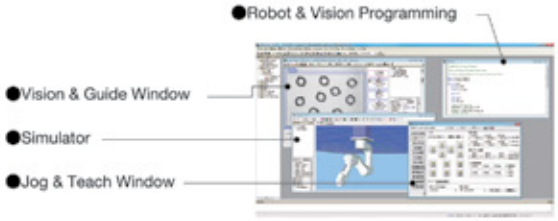
* EPSON RC+ must be running on PC
* Not all Ethernet adapters are supported (contact authorized dealer for supported adapter specifications)
* Up to 8 cameras total per robot controller

Features

Convenience

EPSON RC+ software can be used for both robot and machine vision program development.

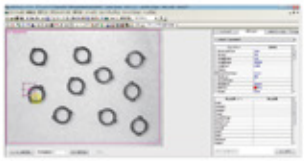
- Other machine vision systems are more complicated to set up because different software must be used for machine vision and robot program development.



Ease of use

Easy registration of vision objects (positioning coordinates, etc.) enables rapid system setup and deployment.

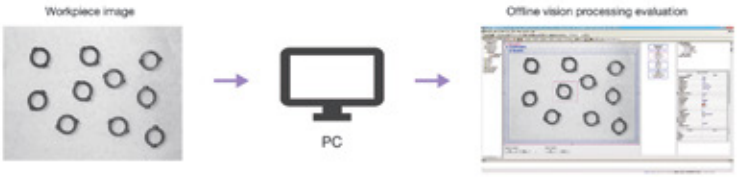
- Vision objects can be registered via simple drag & drop operation.
- Intuitive interface makes operation easy even for first-time users.



Vision simulation

Epson Vision software includes a simulator that lets you visualize robot operation and workflow before equipment is actually installed. This makes it easy to plan and configure the system for maximum productivity, and allow program development to proceed while the system is being constructed.

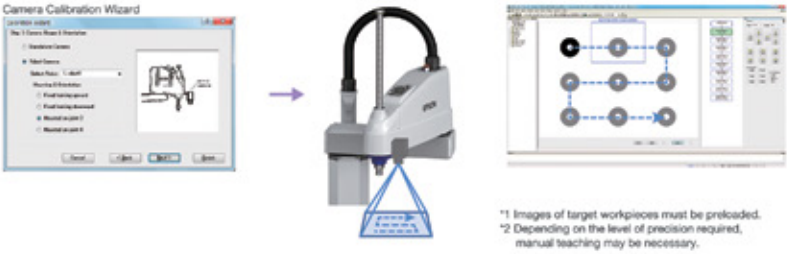
- Vision and process sequencing can be prepared in advance, before system is installed.
- Programs that include image processing sequences can be tested off line.
- If workpiece images are available. image processing can be tested off line.



Easy calibration

A built-in image processing engine makes it easy to align the camera's field of view with the robot's coordinate system, eliminating the need for complex programming when performing vision-to-robot calibration.

The robot automatically*1 follows the steps in the Calibration Wizard to complete the calibra-tion.*2



*1 Images of target workpieces must be preloaded.
*2 Depending on the level of precision required, manual teaching may be necessary.

One-stop service

Whether you need help with initial setup or active production lines, Epson gives you one-stop service convenience for both robot and machine vision systems. With only one service call instead of two to coordinate, your production line will be back up and running in no time.

ROBOT **SOLUTION**

Force-sensing systems

High-rigidity, high-sensitivity S250 Series force sensors are specifically designed for use with Epson robots, enabling extremely precise force control for high-precision assembly tasks.

03 Force sensors

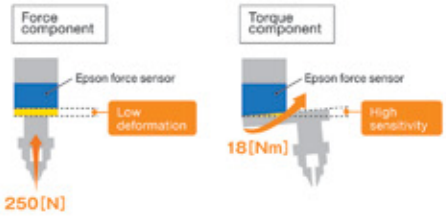
S250 Series force sensors incorporate exclusive Epson crystal piezoelectric technology that ensures a higher level of rigidity and sensitivity than conventional force sensors.

Advantage 1 high rigidity

S250 Series sensors are extremely rigid and resistant to deformation under heavy loads. They have a rated load of 250[N] on the X, Y, and Z axes, and a moment of force of 18[Nm] that makes them particularly sensitive to axial stress.

Advantage 2 high sensitivity

S250 Series sensors also ensure excellent sensitivity and quick response with high resolution of 0.1[N] and a low noise level of 0.035[N] on the X, Y, and Z axes.



Force-sensing system applications

Robots equipped with an Epson S250 Series force sensing system can handle high-precision tasks that cannot be safely automated with teaching or machine vision systems alone. As a result, even production processes that previously required experienced workers to handle delicate and easily damaged workpieces can be fully automated.

ROBOT **SOLUTION**

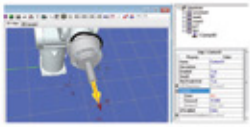
High-rigidity, high-sensitivity S250 Series force sensors are specifically designed for use with Epson robots, enabling extremely precise force control for high-precision assembly tasks.

Easy force sensing program development

The new Force Guide interface makes it easy to develop force sensor operating programs simply by dragging Force Guide object icons into a flow chart. In addition, simulator motion display and force waveform monitoring make debugging easier than ever before.

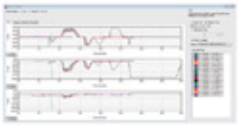
Force Guide GUI

The Force Guide interface provides a clear explanation of what each programming object does, as well as a flow chart view for easy confirmation of program sequence ordering.



Simulator

The simulator enables quick confirmation of the direction of robot arm movement and axis coordinates.



Force waveform display & recording

The force waveform display allows realtime waveforms to be compared with previously recorded waveforms, enabling users to identify operating anomalies and understand how various conditions affect performance.

Direct teaching function

6-axis robots equipped with force sensors can be taught using the Epson TP2/TP3 teaching pendant. Operators can manually move the robot arm and manipulator to the desired position and use the teaching pendant to confirm hardness/softness of the workpiece and the force to be applied.*

Touch-jog function*

In addition to the standard button-operated jog and teaching modes, the TP2 teaching pendant now has a direct teaching mode with a touch-jog function that makes 6-axis robot teaching much easier. During direct teaching operations, you can simply tap the effector to make small, incremental adjustments to the effector's position. There's no need to manually switch input modes because the system can automatically recognize the amount of force being applied to the effector.

* Supported by TP2 teaching pendant and C4, C8, N2, and N6 robots (controller firmware v7.4.6 or newer required)

Push/pull → Direct teaching

Beat → Touch-jog
