# DEBUNKING THE MYTHS ABOUT HOME PROJECTORS

## Myth: A television is just as good as a projector.

There is less strain on your eyes viewing content from a projector screen, as compared to a television screen, due to a gentler light reflection. You also have the flexibility of having a big screen experience in the comfort of your home.

## Myth: I need a blank wall.

You could easily purchase a pull-down screen or a portable screen that can be kept away when it is not in use.

## Myth: Projectors and its maintenance are expensive.

Choose between laser or lamp projectors based on your needs, and quickly recoup your investment by saving on cinema trips with our budget-friendly options! Plus, with laser projectors offering 20,000 maintenance-free hours, you can enjoy daily 5-hour movie marathons for up to 10 years!

\*For selected models only.

## Myth: A dark room is needed.

Thanks to our 3LCD technology, projected contents from Epson home projectors remain brilliant even when viewed in well-lit areas, with equal white and colour brightness of up to 6,000 lumens and high brightness contrast ratio of up to over 5,000,000:1\*.

\*For selected models, refer to the specification sheet for more details.

## Myth: A projection screen is too big for your home?

You can easily adjust the screen size from 60-inches to 100-inches, by shifting your home projectors at a distance of 0.26m to 3m<sup>^</sup> from the wall.

<sup>^</sup>Throw distance range is an estimate and will vary depending on model.

## Myth: Troublesome installation.

Simply turn on the power and be entertained instantly by the inbuilt smart streaming function\* of your projector.

\*For selected models only.
