## Efforts to mitigate environmental impacts in manufacturing

Toyoshina plant in Japan

### Epson becomes the Manufacturing Industry's First<sup>1</sup> to Switch to 100% Renewable Electricity at all sites<sup>2</sup> in Japan.

In November 2021, we achieved 100% renewable electricity at all domestic sites<sup>2</sup>, Shinshu Green Electricity, CO<sub>2</sub>-free value-added electric power produced locally in Nagano Prefecture using Nagano Prefecture hydroelectric power. This is both reducing Epson's GHG emissions<sup>3</sup> and increasing consumption of locally produced energy.

### Assembled<sup>4</sup> using 100% renewable electricity

Epson announced that its worldwide group sites<sup>2</sup> will all meet their electricity needs from 100% renewable energy sources (renewable electricity) by 2023. We have achieved 100% renewable energy at our projector's manufacturing site in the Philippines by generating power with a rooftop mega-solar power plant and by switching to a mix of geothermal and hydroelectric power in January 2021.
