BIGGER AND BETTER. REVOLUTIONISE TEXTILE PRINTING.

SURECOLOR SC-F10030/F10030H

Featured printer is F10030H

PRODUCE LARGER PIECES OF TEXTILES WITH EPSON'S FIRST 76-INCH LARGE FORMAT TEXTILE PRINTER

Introducing Epson's SureColor SC-F10030/F10030H dye sublimation textile printer, where high efficiency, speed and reliability are central to the success of businesses. With new PrecisionCore Micro TFP printheads and an integrated dryer, greater productivity is achieved. Enjoy top-notch print quality as Precision Dot Technology leverages on optimised, new technologies to deliver astounding prints. Built to reduce downtime, a self-repair function and Epson Cloud Solution PORT feature allow users to easily replace specific components on their own for easy and seamless printer fleet management.

IT'S IN THE DETAILS.

EPSON

A MULTITUDE OF BENEFITS AWAIT

The textile industry is ever-changing and the ability to manufacture unique printed textiles on a short production run is quickly becoming a business advantage. From delivering unparalled productivity, to producing nothing less than spectacular print quality, Epson's SC-F10030/F10030H helps evolve and advance your business, taking it to the next level.

The Epson SC-F10030 comes with 4 standard colours: Cyan (C), Magenta (M), Yellow (Y) and Black (K). On the other hand, the SC-F10030H comes with 2 additional ink options for a greater print vibrancy and an expanded print application. You may choose either the Fluorescent Yellow and Fluorescent Pink (FY/FP) configuration, or the Light Cyan and Light Magenta (Lc/Lm) configuration.

ENHANCED LEVEL OF PRODUCTIVITY

When it comes to textile printing, the ability for greater quality output in the shortest amount of time is integral, especially in high volume environments.

NEW PRECISIONCORE MICRO TFP PRINTHEADS

PrecisionCore represents Epson's TFP technology, created by merging advanced key component technologies and high-precision MEMS fabrication processes. Epson's SC-F10030 integrates **four** new 4.7-inch bandwidth PrecisionCore Micro TFP Printheads that allows for a larger printing area and a maximum print speed of 255 sqm/h. On the other hand, the SC-F10030H comes with **six** printheads with a maximum print speed of 246sqm/h. With a total of 3200 nozzles per head and a head resolution of 600dpi, delivering minute detail at incredible speed with unbeatable image quality is made possible.

NEW AND IMPROVED INTEGRATED DRYER

Epson's SC-F10030/F10030H integrates a new dryer that empowers high-speed printing at a maximum temperature of 110°C. With understanding that unwanted ink transfer and wrinkling are common issues with regards to textile printing, the new dryer is designed to eliminate these worries. Paper surface temperature is controlled effectively by heating both frontside (heater with fan) and backside (heater) of the media.

STEP AND REPEAT ON PRINTER

Say goodbye to the hassle of data spooling from your PC as Epson's SC-F10030/F10030H possesses the ability to perform step and repeat print independently. By simply selecting this function and setting the print size on a RIP software, users can now reduce file transfer time from PC to printer and enjoy step and repeat print effortlessly.

EXCELLENT AND INCREDIBLE PRINT QUALITY

Heavily reliant on visual aspects, print quality plays an important role when it comes to attracting and garnering attention from audiences.

EPSON PRECISION DOT TECHNOLOGY

Epson's Precision Dot Technology consist of three different dedicated technologies, namely Micro Weave, Lookup Table (LUT) and Halftone. By optimising the Micro Weave and LUT technology, as well as developing a new Halftone – Multi-layer Halftone, Epson's SC-F10030/F10030H realises higher printing robustness against dot placement error. When these three new technologies are harmonised, amazing image quality with reduced graininess and branding is achieved.

ADVANCED AUTO TENSION CONTROL

High paper feeding accuracy contributes to high print quality. Epson's SC-F10030/F10030H advanced auto tension control function enables accurate and stable media feeding across a variety of media. The media feed motor and roll drive motor synchronises to control paper feed accurately and stably. In this way, any negative effects caused by variance in media weight, roll core shape, diameter, tackiness and take-up reel operation status is reduced. Both paper feeding and printhead (dot placement and density) adjustments are available to users.

AUTO ADJUSTMENT CAPABILITY

HIGH RELIABILITY AND UPTIME MAXIMISATION

Technical malfunctions and troubleshooting pose as common concerns. Designed for reliability, Epson's SC-F10030/F10030H gives users greater peace of mind. In the unlikely event of technical difficulties, repairing is made easy and intuitive, enabling users to solve the issue themselves for increased uptime.

BULK INK SUPPLY SYSTEM

Bulk ink supply system with 10L ink cartridges and hot swap function empowers continuous operation. Should an ink cartridge run out during printing, Epson's SC-F10030/F10030H automatically switches and activates another ink cartridge for uninterrupted printing. The finished ink cartridge can be easily replaced with a new one, all while the printer continues to print using the switched cartridge.

USER SELF-REPAIR FUNCTION

With Epson's first ever User Self-Repair function, specific parts such as the printhead and anti-drying cap can be replaced by users themselves, resulting in faster printer recovery and minimisation of downtime in comparison to waiting for service. The User Self-Repair function is supported by 3 components - Easy self-replaceable parts, Printer Diagnosis System and Epson's Remote Monitoring System.

EPSON CLOUD SOLUTION PORT

Epson Cloud Solution PORT is a cloud-based solution for Epson end users. This software provides users with the status of the connected printer and alerts for troubleshooting if required. The Production Monitor allows users to visualise printer operational status anytime, anywhere, from their PC or smart devices. In this way, productivity improves as users can identify the most urgent actions required and correct the issue efficiently with minimal disruption to the print run.
